

I am opposed to deployment of BPL technology. Existing cable, DSL, and even newer dial-up technologies are more than adequate even for rural Internet users. Further, your permission for BPL will produce incalculable interference on *my* HF spectrum--speaking as a native-born American citizen and an amateur radio operator.

The radio spectrum is to be *managed* and *protected* by the FCC--not exploited to satisfy corporate profit.

I instruct you to deny any and all BPL technologies. I will inform my congressman and senators to do the same. There are alternatives for delivery of Internet broadband but I have access only to one HF spectrum.

Haven't we had our fill of immense corporate interests crushing the little guy? STOP THIS TRAVESTY.
